The first part of the paper discusses the importance of the study of the history of the United States. It is argued that a knowledge of the past is essential for a full understanding of the present. The author then goes on to discuss the various factors which have shaped the development of the United States, including the influence of the British, the Spanish, and the French. The author also discusses the role of the American people in the development of the country, and the importance of the American Revolution. The paper concludes by discussing the future of the United States, and the role of the American people in shaping that future.

INTRODUCTION

This report provides the necessary information for planners engaged in training and employment-related assistance. The Annual Planning Report (APR), formerly the Annual Manpower Planning Report, is prepared annually for dissemination to planners. Because of the data availability for areas less than the State, all areas as required by regulations are presented in this report. Appendices are provided for lengthy tabulations and materials necessary for planners, but not significant for inclusion in the main report. At the end of each section is a page referring to appropriate appendices.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes the need for transparency and accountability in financial reporting.

2. The second part of the document outlines the various methods and techniques used to collect and analyze data. It includes a detailed description of the experimental procedures and the statistical analysis performed.

3. The third part of the document presents the results of the study. It includes a series of tables and graphs that illustrate the findings of the research. The data shows a clear trend of increasing activity over time, which is consistent with the hypothesis.

4. The fourth part of the document discusses the implications of the findings. It suggests that the results have significant implications for the field of study and may lead to further research in this area.

5. The fifth part of the document concludes the study. It summarizes the main findings and provides a final statement on the importance of the research.

I. HIGHLIGHTS AND CONCLUSIONS

Montana is the fourth largest state in land area, ranked 42nd in total population according to the 1970 census. Employment levels have increased at a slower rate than the U. S. average, while the unemployment remained consistently higher. The percent of families below the poverty level in Montana was 10.4%, slightly lower than the U. S. average of 10.7%.

Significant findings in this Annual Planning Report for fiscal year 1978 include higher labor force participation rates (particularly among females), an increasing population, civilian labor force, and high unemployment among non-whites. The unemployment rates among females and veterans are now showing improvements. In fact the unemployment rate for females is at 7.1%, while the rate for all males is 7.2%. Vietnam Era Veterans can expect an unemployment rate around 7.5% during fiscal year 1978.

Of those employed part-time for economic reasons, whites account for 95.5% and nonwhites the remaining 4.5%. Females dominate this group with 54.3% of the individuals; males, only 45.7%. The number of economically disadvantaged in Montana is 100,328, representing 13.2% of the total population. Of that number 67.1% are eighteen years old or over.

The nonwhite groups displayed the highest unemployment rates. Statewide unemployment rates ranged from a high of 30.5% in the nonwhite female age group of 18-19 to a low of 2.5% in the 65+ age group for white males. As a general rule males and whites had the highest labor force participation rates.

I. HIGHLIGHTS AND CONCLUSIONS (Cont.)

Of those in need of employment related assistance, there are 67,280 statewide and 7,904 in the Rural CEP. Special consideration should continue to be geared toward the expected 1,924 unemployed Vietnam Era Veterans in 1978.

Montana has a large number of training facilities, from the university level to On-The-Job-Training (OJT), and from public service assistance to private training. The majority of the public service assistance training is funded through Federal and State programs and includes the Comprehensive Employment and Training Act (CETA), Concentrated Employment Program (CEP), On-The-Job-Training (OJT), Job Corps, Public Service Employment (PSE), and Work Incentive Program (WIN).

II. DESCRIPTION OF AREA

A. Montana, located in the northwestern United States, is bordered by Idaho on the west, Wyoming on the south, North and South Dakota on the east, and Canada on the north. There are fifty-six counties in Montana which range in population from 597 to 100,584. The average county population is 13,571, but forty-three counties have population less than this average. Sixteen counties have populations less than 3,000. Only three counties have population in excess of 50,000.

B. Rural CEP area is composed of the counties of Lewis and Clark, Jefferson, Broadwater, Silver Bow, Deer Lodge, and Meagher. This area is located in the central western part of Montana. The total population for the area is 110,596, representing 14.6% of the State's population.

C. Cascade County with a projected population of 86,325, is bordered on the west and south by the Rural CEP area. Great Falls, one of Montana's principal cities, is located in Cascade county. The county has been designated as a Standard Metropolitan Statistical Area (SMSA).

D. Yellowstone County, with a population of 100,584, is located in the southern central section of Montana. Billings, the largest city in population in Montana, is located here. This county has also been designated as a Standard Metropolitan Statistical Area.

E. Balance-of-the-State is described as all counties not contained in the Rural CEP area. This consists of fifty counties, including the SMSA's of Cascade and Yellowstone counties.

III. ECONOMIC DEVELOPMENT AND OUTLOOK

Energy dominates the economic scene in Montana as it does nationally, but unique situations develop here due to the export nature of the industry. Also, some factors that affect the generation of energy (e.g. weather patterns) play major roles in the lumber and wood products and agricultural sectors. Despite this dependence on energy, Montana's economy has performed well in this recent period of anticipated energy shortages; however, the final test (of economic strength) will come if mandatory energy curtailments become a reality.

As an energy resource state, Montana will have some advantages as the demand for our coal and electricity increases due to the projected national scarcity. On the other hand it can not be assumed that one of the benefits of this situation will be substantial increases in employment. During the initial expansion of the industry we will witness employment gains in construction, but, once construction terminates, employment will approach pre-expansion levels. Energy is no longer a labor intensive industry. For the most part any permanent increases in employment levels will come in the transportation industry, who will have the responsibility of delivering the product to export markets.

Recently, the weather has come to the forefront in the economy. The lack of precipitation in the past year has threatened the hydroelectric capabilities in the Northwest. Probably as critical is the effect we see in agriculture. While depressed farm prices are a major concern, the lack of irrigation may force reductions in the acreage under cultivation, which in turn may lower employment in agriculture at the same time further reducing total agricultural cash receipts.

III. ECONOMIC DEVELOPMENT AND OUTLOOK (Cont.)

The lumber and wood products industry is also keeping an eye on the weather. It is anticipated that lack of moisture in the forests may force premature closing of woods to loggers because of fire danger. The economy of western Montana would be most affected by such an occurrence.

Generally, total employment levels should continue to increase at a modest pace in Montana during fiscal year 1978. Barring severe energy shortages or prolonged major labor disputes, Montana's economy should remain on its upward trend with a projected annual employment increase of around 2%.

IV. POPULATION AND LABOR FORCE CHARACTERISTICS AND TRENDS

Montana's population is expected to increase 9.4% during the 1970 to 1978 period; however, twenty-one counties are expected to show decreases. Six counties are expected to increase greater than 25%. They include Jefferson (59.0%), Rosebud (46.5%), Ravalli (40.5%), Mineral (36.6%), Madison (29.7%), and Lake (25.7%).

Population composition changes for Montana from 1970 to 1978 show the greatest change in non-white females (up 18.6%) and the least increase in white males at 8.3%. Non-white males increased 17.1%; white females, 9.8%. Large decreases were noted in the 5 to 9 years-of-age groups for white males (16.8%) and white females (17.4%). The largest increases by age cohort came in 20 to 29 age brackets. Statewide there was a 29% increase from 1970 - 1978, an increase of over 27,000 individuals.

The Labor Force increased nearly 50% for all non-white males and females during the 1970 - 1978 period. White males displayed a modest increase of 22.1%; white females, 38.7%. White males continue to have the highest labor force participation rate at 78.3%, while non-white females have the lowest rate at 35.3%. Billings has the highest overall participation rate with 72.8%. Statewide we see a rate of only 61.6%.

Montana's Rural CEP area is expected to increase 9.8% in population over 1970 census levels. The non-white population is expected to increase 18.5% while the white population should increase only 9.7%. The male population should increase 9.4% and female population 10.3%

IV. POPULATION AND LABOR FORCE CHARACTERISTICS AND TRENDS (Cont.)

In this area the 20-24 age group shows the largest population increase since 1970 (over 50%), and the 5-9 age group displays the largest decrease.

Jefferson county continues to be the fastest growing county in the state with an increase of 59.0%. The increase can be attributed to its location between Butte and Helena. These two cities provide many jobs and are within commuting distance of all counties in the Rural CEP area. Other major cities in the area include Anaconda and Deer Lodge.

EMPLOYMENT BY INDUSTRY

V. INDUSTRY EMPLOYMENT 1985

Employment estimates during 1974 numbered 299,500 workers while forecast employment in 1985 numbers 342,300 workers - an increase of fourteen percent. In order to determine the magnitude and specific areas of increasing employment by industry, it becomes necessary to categorize industries by like services or products. The first classification of industries for analytical use is divided into two sectors - goods producing and service producing. Goods producing, as the name implies, deals in producing goods for consumption and includes the major industry divisions of agriculture, mining, manufacturing, and contract construction. Service producing industries include: trade; services; government; transportation and public utilities; and finance, insurance and real estate.

It is interesting to note that the services producing sector is larger and growing faster than the goods producing sector. By 1985, the services producing sector is expected to grow nineteen percent as compared to a four percent growth rate in the goods producing sector and will be two and one-half times larger. Although Montana is considered a resource state, it is apparent that most jobs are service oriented and this trend is expected to continue.

The following sections of the nine major industry divisions provide information of anticipated job openings during the 1974 to 1985 period. Replacement needs and industry expansion during the period are discussed, as well as potential industry employment declines.

AGRICULTURE, FORESTRY AND FISHERIES:

Agriculture remains Montana's largest export industry and provided employment opportunities to 37,000 workers in 1974. The employment decline experienced during the sixties and seventies is expected to level off. The 1985 employment forecast for this industry is 37,000 workers, the same as 1974. Employment opportunities exist in this industry through replacement needs rather than by industry expansion. Worldwide demand for food will help offset technology in stabilizing employment levels. Forestry and fisheries are primarily government controlled and should increase proportionately with the population. Any industry expansion during the period will be attributed to forestry and fisheries rather than to agriculture.

MINING:

Mining has played an important role in Montana's history and will continue to do so in the future. Although employment has been declining since the 1940's, interest in energy resources - such as Montana's coal - will help stabilize employment as technology and prices adversely affect metal mining employment. Industry expansion in coal, petroleum, natural gas, quarrying, and non-metallic mining will be prevalent as will replacement needs in all industries in this division. Mining employment levels were estimated at 7,700 workers in 1974 and forecast to 7,800 workers by 1985.

CONTRACT CONSTRUCTION:

Seasonal employment levels are extreme in the contract construction industry, but annual employment opportunities have remained nearly constant since 1949. This fact is in spite of large short-term construction projects such as the Minuteman Missile Project, Yellowtail Dam, Libby Dam, Colstrip Units #1 and #2, and the Interstate Highway System. A constant trend line is expected to continue in this industry through 1985; however, large short-term construction projects are expected to increase employment during the period, and after completion, return employment levels to the trend line of approximately 23,000 workers. Workers will be needed for these large construction projects as well as for replacement needs.

MANUFACTURING:

Manufacturing in Montana is centered around the lumber and wood products, primary metals, and food products industries. These three industries account for two-thirds of the employment in Montana's manufacturing division. Slow growth is forecast through 1985 with employment levels increasing only 2,800 workers. The durable goods sector of manufacturing is forecast to have 19,200 workers by 1985 with non-durable goods having 9,200 workers. Seasonal employment and labor disputes in parts of manufacturing can have far reaching effects in Montana's economy. Manufacturing in Montana is not comparable to the Nation's manufacturing structure.

TRANSPORTATION, COMMUNICATIONS, AND PUBLIC UTILITIES:

Slower than average growth is expected for this industry division; however, the major industries in this division are reacting differently and must be separated to analyze their respective growth trends. Transportation, primarily because of railroads, is expected to record a loss of employment by 1985. Communication and the public utilities industries combined are expected to increase twenty percent with employment growth providing opportunities for 9,300 workers by 1985. Major employment gains will be made in the electric, gas, and sanitary service industries with communications remaining stable.

WHOLESALE AND RETAIL TRADE:

An expected increase of 9,000 workers by 1985 will help wholesale and retail trade, Montana's second largest industry. Total employment for this division is forecast to exceed 78,000 workers. Wholesale trade will account for nineteen percent and retail trade eighty-one percent. Eating and drinking places, gas stations, and general merchandise stores will employ the largest number of workers with wholesale dry goods, apparel, and farm produce employing the fewest number of workers. Generally, good employment opportunities are expected to prevail in this industry division through industry growth and replacement needs.

FINANCE, INSURANCE, AND REAL ESTATE:

Although this industry is small, an eleven percent growth rate during the 1974 to 1985 period can be expected. Growth in this division is primarily linked to population growth. Workers in this industry

FINANCE, INSURANCE, AND REAL ESTATE: (Cont.)

division are usually white collar, and they can be expected to expand their ranks by 1,300 workers. Replacement needs are still another source of providing jobs in this industry division.

SERVICES:

The service industry is Montana's largest industry division and is expected to provide 103,200 jobs for workers by 1985. This represents a twenty-seven percent increase or an additional 22,000 workers over 1974 levels. Services include the industries of personal, household, lodging, auto, health, legal, educational, and miscellaneous services. All industries within this division are expected to provide good employment opportunities through growth and replacement needs by 1985. More than half of these job opportunities will be in the health and educational service industries. The major reasons for the rapid growth in this division results from an increasing population and standards that society now demands.

PUBLIC ADMINISTRATION:

Included in the public administration industry are postal services and federal, state, and local administration workers that cannot be placed in any of the other major industry divisions. This government division is expected to grow at a thirty-three percent rate by 1985 with federal and local administration recording the largest number of workers. Industry growth by 1985 will provide jobs for nearly 5,500 additional workers over 1974 levels.

FEMALE EMPLOYMENT BY INDUSTRY

Montana female employment trends for 1976 have shown a general pattern of increase over 1975 figures. Total employment for women in the state moved from a level of 94.6 thousand in 1975, to 98.8 thousand in 1976. This amounted to an annual increase of 4.4 percent.

Female employment showed the greatest advances in manufacturing (16.0%) government (7.4 %), and the finance, insurance, and real estate sector (6.5 %). Other increases were made in the trade and services sectors, while employment levels remained unchanged in contract construction, mining, and transportation and public utilities.

The advancement of the female employment levels becomes particularly significant when compared to the changes in the employment levels of the total state civilian labor force between 1975 and 1976. In every industry sector except services, the percentage increase in female employment was greater than the percentage increase in total civilian labor force.

As indicated by this trend, women compose a larger percentage of the total civilian labor force than they did one year ago. In 1975, women represented 39.4 percent of the total labor force, and by 1976 this percentage had increased to 40.5 percent. Preliminary projections suggest that the advancement of the percentage of female employees in the total civilian labor force will continue in 1978.

EMPLOYMENT BY OCCUPATION

VI. EMPLOYMENT BY OCCUPATION 1985

As Montana's industries continue to grow, changes in the occupational structure will also take place. During 1974, white-collar workers - professional, technical, managers, officials, proprietors, clerical, and salesworkers - outnumbered blue collar workers - craftsmen, foremen, operatives, and laborers - by 42,000 jobs. This gap is expected to increase to nearly 60,000 workers by 1985. The major reason for this increase is that as more growth continues, jobs become more complex and specialized because of technology and the creation of more occupations. Service workers is the major occupational group expected to have the most workers by 1985. Farm workers is the only major occupational group expected to decrease by 1985. The other major occupational groups are expected to provide good job opportunities during the period 1974-1985.

Professional, Technical, and Kindred Workers

Highly trained personnel and college graduates comprise the majority of workers in this occupational group. Although ranked the fourth largest occupational group in 1974, expectations for a third place tie with the craftsmen, foremen, and kindred workers may be a reality by 1985. Occupations in this group include technical engineers, life and physical scientists, mathematical specialists, science technicians, computer specialists, social scientists, teachers, writers, artists, entertainers, and other professional and technical occupations not elsewhere included.

Average annual job openings in this occupational group should number 2,400 openings during the 1974 to 1985 period. Industry expansion will create 800 of these openings with the balance coming from replacement needs. The largest number of openings per year is expected to be from the registered nurses and

elementary school teachers occupational titles. Minimal growth is expected from metallurgical engineers, physicists and astronomers, embalmers, and flight engineers. Keen competition is expected for most all entry level positions.

Managers, Officials, and Proprietors

As businesses and government continue to grow in Montana, emphasis will be placed on the recruiting of skilled and trained managers in the same proportion as during 1974. An estimated 5,000 worker increase during the 1974 to 1985 period is expected, with average annual job openings to number approximately 1,800. Industry expansion will account for one-fourth of the openings per year with the balance being replacement needs. Occupational titles in this group include buyers, sales, and loan managers; administrators and public inspectors; and managers, officials, and proprietors. Bank financial managers, public officials, administrators and office managers are the identifiable occupations that should experience the largest number of job openings per year. All other occupations in this group should experience moderate growth for job opportunities.

Sales Workers

Workers engaged in this occupational group are expected to increase proportionately with businesses as demand from a growing population increases. Sales workers comprise only 5.5% of all occupations, but the number of average annual job openings is expected to be 900 with 200 of these openings resulting from industry expansion and the balance from replacement needs. Sales workers are primarily employed in retail, wholesale, manufacturing, real estate, and insurance industries. Job opportunities should be good in all occupations except auctioneers and newsboys.

Clerical Workers

Clerical workers is expected to be Montana's second largest occupational group

by 1985, surpassing craftsmen, foremen, and kindred workers. Occupations in this group provide Montana's businesses and government with skills from secretaries, stenographers, typists, office machine operators, and other clerical workers. Average annual job openings is estimated to be 3,300 workers with 900 workers resulting from industry expansion and 2,400 workers as replacements. Total employment in this group should exceed 49,000 workers with excellent annual opportunities in the secretaries, typists and bookkeepers occupations.

Craftsmen, Foremen, and Kindred Workers

Montana's labor pool of construction workers, metalworkers, printers, transportation and public utilities crafts along with other crafts and foremen should provide approximately 1,300 jobs each year during the 1974 to 1985 period. Industry expansion is expected to contribute 400 of these openings annually with the remaining workers to be replacements for current workers. Technology is the major contributor of reducing this group's employment possibilities. Carpenters, excavating and grading machine operators, and auto mechanics along with their respective apprentices will be the leaders in providing annual job opportunities for this group.

Operatives

Workers in this occupational group typically work in manufacturing plants, drive trucks and buses, and operate equipment. Total employment in this group accounted for 32,000 jobs in 1974 and with an anticipated increase of 3,000 workers by 1985 will number 35,000 workers. Annual job opportunities are expected to reach 1,000 openings with 300 workers being added by industry expansion and 700 workers being replacements. Technology should reduce employment opportunities in the semi-skilled occupations. The only occupation from this group exceeding 100 openings per year is truck drivers. Minimal growth can be expected in many of this group's occupations.

Service Workers

Service workers, the largest occupational category, totaled 43,000 workers in 1974 and is expected to increase to nearly 54,000 workers by 1985. Places of employment for this occupational group can be found in all industries. The demand for more personal, health, protective food, and cleaning services provides the stimulus for continued occupational gains. At least a dozen of the occupations in this group can expect excellent job opportunities during the 1974 to 1985 period. Some occupations will show minimal growth, but most will provide 3,800 workers employment with 1,000 openings from industry expansion.

Laborers

Laborers remain Montana's smallest occupational group - representing about five percent of total employment. This group is expected to increase only 400 workers during the 1974 to 1985 period for total employment of 16,200 workers. Replacement needs will contribute the most to average annual job openings. A strong back is usually a prerequisite for entry into this occupational group.

Farmers and Farm Workers

This is the only occupational group to decrease in number during the 1974 to 1985 period. However, while total employment is decreasing, annual job opportunities should average about 1,000 openings. Replacement needs will require approximately 1,200 openings per year, but this is offset by the agricultural industry losing 200 openings per year. Owners and tenants will require 600 openings per year, (700 for replacement needs and a loss of 100 for industry expansion). The largest loss to industry expansion is in the farm laborers (wage workers) occupation. Replacement needs will be required in most occupations.

UNEMPLOYMENT OUTLOOK

VII. RECENT TRENDS IN UNEMPLOYMENT

During 1975, Montana's unemployment rate averaged 8.1% while the national rate averaged 8.5%. In 1976, Montana's economy reacted quickly to the upswing in the national economy, but did not improve as much as did the Nation's. While the national unemployment rate dropped 0.8 of a percentage point to 7.7% Montana's rate only dropped to 7.8%. As we were partially immune to the latest recession, so too are we less likely to fully experience the benefits of the recent upturn in the national economy.

The Rural CEP area failed to improve at all in 1976. In fact, the unemployment rate edged upward in 1976. Had it not been for the stable employment of state government, the Rural CEP may have been even more adversely affected.

Yellowstone County continued to exhibit the lowest unemployment rate of the required labor market areas to be presented. Coal development and expanding trade and service industries were primarily responsible for a positive balance as compared to other areas. Cascade County, as with the Balance-of-State, has had an average unemployment rate close to the Statewide average.

In recent months unemployment in all areas of the State has been reduced. At the heart of this reduction is the boom in building construction. If activity in this area is maintained throughout the summer, the derivative effects could drive unemployment down to the lowest rates since 1974.

SOCIO-ECONOMIC CHARACTERISTICS
AND NEED FOR
EMPLOYMENT RELATED ASSISTANCE

There is need to know the socio-economic characteristics of the population in relation to a need for employment-related services. This section provides that information. With special emphasis on the Vietnam-Era Veterans a special section following the tables is provided for the Veterans group.

Montana has a total of 12,000 individuals employed part-time for economic reasons with the Rural CEP area accounting for 1,921 or about 16%. Males and females were closely distributed, but the whites accounted for most of the total. Of those 14 years and over receiving welfare payments, the Rural CEP area accounted for 2,285 of the total 16,138 individuals statewide.

The economically disadvantaged totalled 100,328 statewide and 11,786 in the Rural CEP area. However, of that number, it is estimated that those persons under 18 years old would not be likely to seek employment-related assistance. The estimated number seeking employment-related services statewide is 67,280 with 7,904 in the Rural CEP area. The number of unemployed Vietnam-Era Veterans is forecast to be 1,924 with 288 in the Rural CEP area in 1978.

VETERANS AND VIETNAM-ERA CHARACTERISTICS

INTRODUCTION

The various tables in this section on characteristics of Montana's male veterans are largely based on data from the last U. S. Census of population, since this is the latest available source of information of any detailed nature. At that time there were 99,983 veterans in Montana, of which 16,556 were Viet Nam-era veterans. However, from the latest Employment Security estimate for July 1974, the number of veterans in Montana rose to about 108,900. The number of Viet Nam-era veterans climbed to 27,000.

Total number of Veterans (Census)	99,983
Deaths	4,200
In-migration	2,700
New Veterans	10,400
Total number of Veterans (1974)	108,900

Of the 99,983 male veterans in Montana, 54,866 were from urban areas and 45,117 were from the rural areas of Montana. Married veterans totaled 81% and 6.7% were widowed or divorced.

In terms of education, the average (median) veteran has completed 12.4 years of school; 37.5% of the veterans had completed high school and 7.5% or 7,510 had completed 4 years of college.

There were 86.2% of the veterans in the labor force and 81,534 or 81.5% of them were employed. The unemployment rate for veterans was 5.4% compared with 7.9% for all males 16 years and older.

Labor Force	86,149
Employed	81,534
Unemployed	4,615
Rate (percent)	5.4%
Not in Labor Force	13,834

FOOTNOTES

- 1/ These data were produced from the second and fourth counts of the 1970 Census of Population as this is the only source of this type of information currently available.
- 2/ The 1970 Census of Population enumerated Spanish-American as mostly white but also some Negroes and other races.
- 3/ Includes all other racial groups not elsewhere classified, such as Hawaiian, Korean, Aleut, Eskimo, Malayan, Polynesian, etc.
- 4/ Includes those persons living within the Montana boundaries of Yellowstone National Park.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes the need for transparency and accountability in financial reporting.

2. The second part of the document outlines the various methods and techniques used to collect and analyze data. It includes a detailed description of the experimental procedures and the statistical analysis performed.

3. The third part of the document presents the results of the study. It includes a series of tables and graphs that illustrate the findings of the research. The data shows a clear trend of increasing activity over time.

4. The fourth part of the document discusses the implications of the findings. It suggests that the results have significant implications for the field of study and may lead to further research in this area.

5. The fifth part of the document concludes the study. It summarizes the main findings and provides a final statement on the importance of the research.
